ABHISHEK CHOUDHARY

Full-stack Engineer | TypeScript, Node.js, React

choudharyabhishek2199@gmail.com | India

github.com/av1choudharyy | linkedin.com/in/av1choudharyy

Full-stack engineer working across product development, backend services and AI application workflows. Built React/Node.js operational systems, order management APIs and customer-facing experiments; now building Aryra alongside a software consulting engagement. Strongest in TypeScript/JavaScript, Node.js, React, databases and system design.

EXPERIENCE

Aryra

Jan 2026 - Present

Founder

aryra.ai

- **Product ownership.** Built an AI work platform spanning onboarding, organization and member management, settings, plan entitlements and in-app feedback. Connected product decisions with implementation across the web application and backend.
- **Agent execution and orchestration.** Implemented a custom tool-using agent loop and asynchronous research orchestration in Python/FastAPI, including dependency-aware execution, cancellation and streaming progress.
- **TypeScript SDK and integrations.** Developed TypeScript/Node.js integration and companion components, including integration clients and plugin provider lifecycles with ownership, recovery and cleanup handling.
- **Permissions and sessions.** Implemented deny-wins authorization policies and chat session controls, including ownership checks, session locking and persisted events for streamed interactions.
- **Knowledge retrieval.** Built hybrid PostgreSQL full-text and pgvector retrieval with reciprocal rank fusion, reranking and caching for a searchable knowledge bank.
- **Observability.** Integrated OpenTelemetry with a self-hosted Grafana stack using Loki, Tempo and Prometheus to inspect application behavior and trace backend requests.

Piping Rock India

Mar 2025 - Present

Senior Software Consultant

Bengaluru, India

Concurrent consulting during Headout tenure; full-time consulting after Oct 2025.

- **Document and asset workflows.** Built AWS document and asset analysis workflows combining Textract OCR, Bedrock language and vision models, PDF page extraction and embedding-based product matching.
- **Agentic retrieval.** Developed a LangGraph-based retrieval platform using AWS Bedrock, with multimodal indexing and language-model verification for document and product analysis.
- **Continued engagement.** Returned at a director's invitation following earlier work at Piping Rock; continued the engagement through annually renewed consulting contracts.

EXPERIENCE CONTINUED

Headout

Mar 2025 - Oct 2025

Senior Software Engineer | Frontend — Bengaluru, India

- **Product experiments.** Worked on review-collection UI experiments across web and mobile at a reported 1.5 million-user scale; the review experiment recorded an 11.4% improvement in submission rate.
- **Review collection integration.** Implemented WhatsApp Business review-collection flows using Flow APIs, webhook handling, cryptographic validation, templates and media handling.
- **Cross-functional delivery.** Collaborated with product and design on review and rating features, connected frontend experiments with APIs and Mixpanel analytics, reviewed changes and mentored engineers.

Cimpress

Dec 2023 - Mar 2025

Software Engineer — Mumbai, India

- **Order management APIs.** Led an epic to design and implement APIs for order creation, validation, rejection, cancellation and search across the order lifecycle.
- **PostgreSQL performance.** Optimized PostgreSQL stored procedures, reducing a reported query response time from 26 seconds to under one second.
- **Traceability and integration.** Designed a DocumentDB-backed traceability system for dynamic attribute search and entity relationships, and integrated it with legacy infrastructure through wrappers.
- **Reusable UI.** Led a reusable-component epic for the order management UI, coordinating a subgroup and component delivery.

Piping Rock

Jan 2022 - Dec 2023

Software Developer — Bengaluru, India

Internship for the first six months, followed by full-time employment.

- **Workflow software.** Built and deployed a React/Node.js warehouse management system on AWS for bottle ordering, manufacturing and scheduling.
- **Scheduling automation.** Automated batch scheduling with a drag-and-drop React interface for operational teams.
- **Database access.** Designed a connection-pool manager across servers and access levels, and a JSON-driven SQL abstraction for business logic.
- **Real-time and UI components.** Developed a WebSocket service using API Gateway and DynamoDB, alongside reusable React search and autocomplete components with throttling, debouncing and documentation.

TECHNICAL SKILLS

- **Primary stack.** TypeScript, JavaScript, Node.js, NestJS, React, Next.js, SQL
- **Data and cloud.** PostgreSQL, pgvector, MySQL, DocumentDB, DynamoDB, Redis; AWS, GCP
- **Systems and tooling.** REST APIs, WebSockets, SSE, asynchronous workflows, authorization, system design, Git, Docker, CI/CD, OpenTelemetry, Grafana
- **Additional implementation.** Python, FastAPI, LangGraph, retrieval and LLM integrations

EDUCATION

RNS Institute of Technology, Bengaluru — 2022

BE in Information Science & Engineering

Visvesvaraya Technological University (VTU) | First Class with Distinction
